The CHI St. Vincent Medical Group, in partnership with [the Arkansas Health Network](#), has opened the CHI St. Vincent Business Health & Convenient Care clinic at the Port of Little Rock.

The new clinic is at 6800 Lindsey Road in Little Rock.

The partnership will provide port businesses, employees and their dependents with access to CHI St. Vincent's medical services and its employee wellness initiatives.

"This partnership provides an incredible opportunity to highlight how AHN's value-based approach to health care assists businesses and industries by controlling rising health care costs while simultaneously improving employee health," said AHN President Bob Sarkar in a news release. "No company should have to sacrifice quality of care for their employees because of rising costs. We can show them how to manage those costs while building a happier, healthier workforce."

Dr. David Foster, president of the CHI St. Vincent Medical Group, added, "We look forward to showing how our medical group's commitment to compassionate care and AHN's evidence-based approach can help improve lives as well as health care experiences for those we'll serve at the Port of Little Rock."

The new clinic offers pre-employment physicals; evaluation and treatment of workplace injuries; other medical evaluations as required; annual physical exams; immunizations; lab services; rehabilitation evaluation; respiratory screening; substance abuse services; and more.
